

Diabetes Medical Guide

Introduction

Diabetes is a chronic health condition that affects how the body converts food into energy. The body either does not produce enough insulin or cannot effectively use insulin.

Types of Diabetes

Major types include Type 1 Diabetes, Type 2 Diabetes, and Gestational Diabetes. Type 2 diabetes is the most common form worldwide.

Symptoms

Common symptoms include excessive thirst, frequent urination, fatigue, blurred vision, slow wound healing, and unexplained weight loss.

Risk Factors

Risk factors include obesity, lack of exercise, unhealthy diet, family history, high blood pressure, and smoking.

Diagnosis

Diabetes is diagnosed using blood sugar tests such as fasting glucose tests, HbA1c tests, and oral glucose tolerance tests.

Management

Management includes healthy eating, regular exercise, medication, insulin therapy, and monitoring blood sugar levels.

Complications

Poorly managed diabetes may lead to heart disease, kidney damage, vision problems, nerve damage, and stroke.

Prevention

Maintaining a healthy weight, regular physical activity, and balanced nutrition can help prevent Type 2 diabetes.
