

Heart Disease Medical Guide

Introduction

Heart disease refers to several conditions affecting the heart and blood vessels. It is one of the leading causes of death globally.

Common Types

Common types include coronary artery disease, heart failure, arrhythmia, and congenital heart disease.

Symptoms

Symptoms may include chest pain, shortness of breath, fatigue, dizziness, and swelling in the legs.

Risk Factors

Risk factors include smoking, obesity, high cholesterol, diabetes, stress, and physical inactivity.

Diagnosis

Doctors may use ECG, echocardiograms, stress tests, blood tests, and angiography for diagnosis.

Treatment

Treatment may involve lifestyle changes, medications, surgery, angioplasty, or cardiac rehabilitation.

Emergency Warning Signs

Severe chest pain, sudden shortness of breath, or pain radiating to the arm or jaw may indicate a heart attack.

Prevention

Healthy diet, exercise, stress management, avoiding smoking, and regular medical checkups reduce risk.
